Search Tips

Get the most out of Google Scholar with some helpful tips on searches, email alerts, citation export, and more.

Finding recent papers

Your search results are normally sorted by relevance, not by date. To find newer articles, try the following options in the left sidebar:

1. click "Since Year" to show only recently published papers, sorted by relevance;
2. click "Sort by date" to show just the new additions, sorted by date;
3. click the envelope icon to have new results periodically delivered by email.

Locating the full text of an article

Abstracts are freely available for most of the articles. Alas, reading the entire article may require a subscription. Here're a few things to try:

1. click a library link, e.g., "FindIt@Harvard", to the right of the search result;
2. click a link labeled [PDF] to the right of the search result;
3. click "All versions" under the search result and check out the alternative sources;
4. click "Related articles" or "Cited by" under the search result to explore similar articles.

If you're affiliated with a university, but don't see links such as "FindIt@Harvard", please check with your local library about the best way to access their online subscriptions. You may need to do search from a computer on campus, or to configure your browser to use a library proxy.

[\[PDF\] BioProspector: discovering conserved DNA motifs in upstream regulatory regions of co-expressed genes.](#)

[X Liu, DL Brutlag, JS Liu - Pacific Symposium on Biocomputing, 2001 - psb.stanford.edu](#)

The development of genome sequencing and DNA microarray analysis of gene expression gives rise to the demand for data-mining tools. BioProspector, a C program using a Gibbs sampling strategy, examines the upstream region of genes in the same gene expression ...

[An algorithm for finding protein–DNA binding sites with applications to chromatin-immunoprecipitation microarray experiments](#)

[XS Liu, DL Brutlag, JS Liu - Nature biotechnology, 2002 - nature.com](#)

Abstract Chromatin immunoprecipitation followed by cDNA microarray hybridization (ChIP–array) has become a popular procedure for studying genome-wide protein–DNA interactions and transcription regulation. However, it can only map the probable protein–DNA ...

Have a clinical question? Try PubMed Clinical Queries.

Advantages of using MeSH Terms

<http://www.nlm.nih.gov/mesh/introduction2007.html>

- Represent a subject concept & no synonyms needed
- Find relevant articles on a search topic that may not be explicitly mentioned in a title or abstract
- Focus search specifically eliminate irrelevant records
- Increase search efficiency
- Get complete, accurate and highly focused results

Disadvantages of MeSH

<http://www.nlm.nih.gov/mesh/introduction2007.html>

- Thesaurus terms may not cover all concepts, especially new concepts and jargon
- Not every concept in abstract or article can get thesaurus terms

Current Awareness

- Google Scholar Alerts
